IRDR Young Scientists Programme Offer Letter

Dear Saja Aslam A.M.,

I have a great pleasure to inform you that your application *An approach to develop risk-sensitive development plans to build resilient communities* to the IRDR Young Scientists Programme has approved by IRDR and I warmly welcome you to the IRDR community!

As you know, Integrated Research on Disaster Risk Programme (IRDR) is an international, multidisciplinary research initiative of ten years' duration launched to address the major challenges of natural and human-induced environmental hazards. It aims to adopt an international, transdisciplinary and cross-hazard approach to conduct disaster risk reduction (DRR) research, and to reduce the impacts as well as losses induced by natural disasters. In this undertaking, we need bright young researchers to join and support!

We will get back to you with further information on IRDR training programs and other events. Please look at the list of our Scientific Committee (SC) and ICoE (International Center of Excellence) in our website (www.irdrinternational.org). We will be happy to link you with them, if you wish so.

We wish you a great achievement in your proposed research under IRDR Young Scientists Programme. We will also link you to the UN Major Group for Children & Youth Science-Policy Interface Platform-Young Scientists Platform on DRR.

Congratulations!

Rajib SHAW

Executive Director
Integrated Research on Disaster Risk
